TECHNOLOGY
AWARDS**

How One Community's **AWARD-WINNING** Technology Integration Improved Safety

When it comes to technology for Senior Living, there is an array of products and designs that boost safety, efficiency and marketability, and it can be a challenge to create the right technology solution for a particular community. For IntegraCare's Hunters Woods at Trails Edge, the right combination of unique technology design and state-of-the-art equipment was recognized with a 2019 McKnight's Senior Living Excellence in Technology Gold Award.

IntegraCare partnered with Direct Supply to create a forward-thinking, world-class technology ecosystem. See how their technology helps improve the lives of residents, guests and staff members:

Project Overview

Located in Reston, VA, Hunters Woods at Trails Edge is an innovative senior community that provides an active lifestyle for residents. With more than 300,000 square feet, the community offers four levels of care, including Independent Living, Assisted Living, Memory Care and Life Bridges, which provides care to higher-acuity residents. Centralized operations, like foodservice, administration, maintenance and housekeeping, serve all four levels of care. In such a large building, monitoring all operational systems can be challenging, and IntegraCare needed superior safety and communications features to help differentiate this community.

Innovative Solutions

IntegraCare chose to partner with Direct Supply to create a technology solution for their unique community. The Direct Supply Technology Solutions team of experts:

- › Coordinated the design to future-proof the technology investment
- › Simplified fulfillment of systems through one source
- › Facilitated engineering and installation needs

Project Type: New Construction

Care Type: Independent Living,
Assisted Living and Memory Care

Operator: IntegraCare

Units: 210

Services Provided: Technology Design
and Procurement

The Integrated Systems Solution Set

Emergency Call

As the central reporting and communication platform, this system acts as the integration destination for all systems and keeps staff informed of key actionable events.

Surveillance

With the ability to see real-time or recorded footage, building security staff can access valuable imagery around the campus via app or network-connected workstation.

Network Infrastructure (WiFi)

The network, inclusive of WiFi and wired LAN connectivity, is designed and deployed to meet the rigorous business, social and visitor requirements to keep everyone and everything connected.

Structured Cabling

All of the essential category, fiber optic, network and communication cable has been purposely designed and deployed to meet business needs now and in the future.

Electronic Access Control

Residents, family and staff members electronically access doors that are integrated with power-assist openers, which automates use while allowing door activity monitoring 24/7.

Wander Monitoring

Staff members monitor real-time data to prevent possible elopement situations.

Intercom

Staff remotely open doors from an app whenever a visitor activates the intercom station, which is an essential functionality during evening hours or when staff are mobile.

The integration of these technology systems provides the highest level of safety and convenience for residents while reducing the burden on staff and decreasing the response time, ultimately keeping residents safer and staff happier.

Plus, prospective residents' families can see the obvious benefit to the state-of-the-art safety measures. With detailed reports on who entered the resident's room, real-time data to facilitate faster staff response times and the option of power-assist door openers, this building provides excellent peace of mind for families.
